

Cheryl joined Nutrients for Life Foundation Canada in the fall of 2021. She has been connecting with teachers through social media and emails to inform them about Nutrients for Life resources, events, Learning Gardens and workshop opportunities. Her experience as a science curriculum writer has been put to use while assisting in the development of the Canadian version of the H2Know case study investigation.

Cheryl has numerous years of experience as a Middle Years Science Teacher and a High School Biology and Topics in Science teacher using many of the Nutrients for Life resources within her own classes.

Cheryl has facilitated science workshops for teachers and students around the province of Manitoba and she looks forward to getting back out in the field and wetlands to guide students and teachers in their explorations once again.

*“I enjoy connecting teachers with engaging resources and activities that allow their students to experience the real world of soil science, plant growth, 4R Nutrient Stewardship and Watershed health.”*
